Underway Seawater System

Description:
The seawater system supplies seawater to the Aquarium Room, Wet Lab and Hydro Lab. Green strand piping, a non-metallic, chemically resistant material, has been used throughout the system to minimize algae and bacterial growth. It also maintains its structural integrity under low temperatures. Large diameter piping and a minimum of 90° turns helps to prevent the formation of frazil ice in the system. The seawater system is also equipped with a centrifugal ice-strainer/de-bubbler.
